Australia's leading graphene company

# First Graphite to Change Name

Advanced materials company, First Graphite Limited ("FGR" or "the Company") (ASX: FGR) will seek shareholder approval for its change of name to *First Graphene Limited* at its forthcoming Annual General Meeting.

The directors believe this change more accurately reflects the activities of the Company as it continues its progress as Australia's leading graphene company.

A review of the graphene operations and IP developments will be provided next week, following a review of university projects this week by visiting consultant Dr Andy Goodwin.

### *About First Graphite Ltd (ASX: FGR)*

*First Graphite produces high quality graphene from high grade Sri Lankan vein graphite.*

*First Graphite seeks to develop graphene production methods and acquire graphene related intellectual property which can provide further revenue related opportunities.*

### *About Graphene*

*Graphene, the well-publicised and now famous two-dimensional carbon allotrope, is as versatile a material as any discovered on Earth. Its amazing properties as the lightest and strongest material, compared with its ability to conduct heat and electricity better than anything else, mean it can be integrated into a huge number of applications. Initially this will mean graphene is used to help improve the performance and efficiency of current materials and substances, but in the future, it will also be developed in conjunction with other two-dimensional (2D) crystals to create some even more amazing compounds to suit an even wider range of applications.*

*One area of research which is being very highly studied is energy storage. Currently, scientists are working on enhancing the capabilities of lithium ion batteries (by incorporating graphene as an anode) to offer much higher storage capacities with much better longevity and charge rate. Also, graphene is being studied and developed to be used in the manufacture of supercapacitors which are able to be charged very quickly, yet also be able to store a large amount of electricity.*
